

ER Motor Instruction

A Wire Connection

B Operation

- 1) Close switch A, the motor will run upwards.
- 2) Close switch A again or close switch B, the motor will stop running.
- 3) Close switch B, the motor will run downwards.

Note: Single-control switch is only compatible with 5-core wires ER tubular motor, dual-control switch is only compatible with 6-core wires ER tubular motor.

! Announcement

- Setting may fail due to the interference of signal. If in this case, please reset.
- The emitter RE101 is taken as an example in this instruction. The receiver is compatible with several other rolling code emitters.
- Please do not press buttons for too long in case life span of battery declines. The button press should be about 0.5s with 1S interval. If the battery is in low power, please replace battery.
- The control unit is of high voltage. Please do not place it in humid atmosphere.
- Children should be supervised to ensure that they do not play with the appliance.
- Ambient temperature: -10℃~+55℃.
- All products are as per material subjects if there is change in appearance, color, function etc. The information is subject to changes without prior notice.

ER Motor Instruction

1 Technique Specifications

- Power: AC 220V/50Hz(110V/60Hz)
- Protection Index: Ip44
- Loaded Power ≤ 400W
- The motor can be compatible with 15 emitters at most
- The motor will cut off the power after working for 4 mins continuously

2 Wire Connection

3 Code Learning

Note: a) Way A is only for the tubular motor which didn't learn any emitter's code.
b) If the motor has already learned emitter's code, way A is invalid for this motor, but you can cut the electricity and then power on the motor three times continuously, and make sure the motor vibrate each time, then way A is valid for this motor.

Note: After code learning, you can use the emitter to control the motor to run up, down and stop.

4 Copy

Note: Emitter B can control the tubular motor after it learns code from emitter A.

5 Code Deleting

ER Motor Instruction

B:Delete all emitters

6 Direction Change

7 Set Step by Step Function

Note: If the motor is in vibration state, press emitter's UP or DOWN button for 3 S, the motor will run continuously.

8 Delete Step by Step Function

9 Up Limit Setting

10 Down Limit Setting

ER Motor Instruction

11 Up Limit Deleting

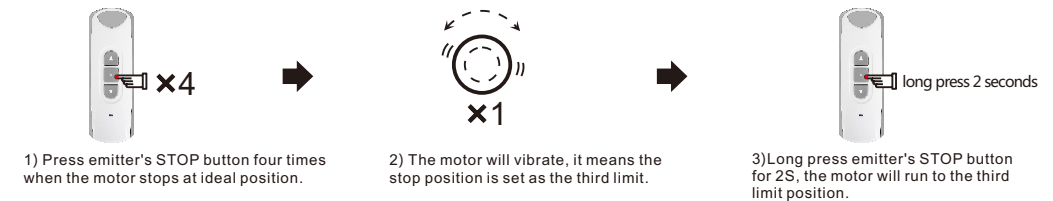

12 Down Limit Deleting

13 The third limit

A Set The Third Limit

B Reset The Third Limit

Note: 1) The third limit is also named as the intermediate limit, it is available at any position between up and down limit. 2) The third limit will be deleted automatically if the up/down limit is deleted.

14 Optional Function: working with manual switch

☐ 1) Single-Control Switch (be compatible with 5-core wires ER tubular motor)

A Wire Connection

B Operation

The tubular motor will run Up - Stop - Down - Stop cycle when the switch is pressed each time.

☐ 2) Dual-Control Switch (be compatible with 6-core wires ER tubular motor)
